Integrative Medicine Use in Advanced Cancer

THE UNIVERSITY of NORTH CAROLINA at CHAPEL HILL

Gary Asher, MD, MPH
Department of Family Medicine
Lineberger Comprehensive Cancer Support Program
gasher@med.unc.edu

Objectives

Definitions

- CAM, actual practices, IM

CAM use among U.S. cancer patients

- General population
- Advanced cancer population

CAM use at NCCH

Complementary & Alternative Medicine (CAM)

A group of diverse medical and health care systems, practices, and products that are not presently considered part of conventional medicine.

CAM Practices

Four domains

- Mind/Body medicine
- Biologically based practices
- Manipulative and body-based practices
- Energy medicine

Whole medical systems

- Traditional Chinese Medicine (TCM)
- Ayurveda
- Homeopathy
- Naturopathy

NCCAM - http://nccam.nih.gov/health/whatiscam/#3

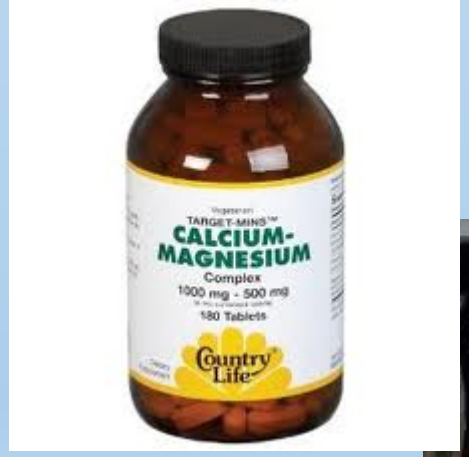
Mind-Body Medicine

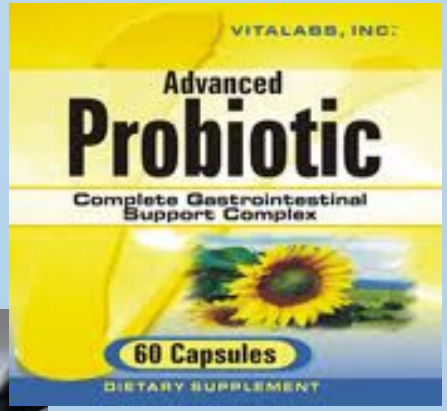
- Meditation, Yoga, Tai Chi Chuan
- Guided imagery, Progressive relaxation, Biofeedback, Hypnosis
- Support Groups, Expressive therapy

- anxiety, chronic pain
- mood, quality of life, sleep

Biologically based practices

Vitamins & Minerals





Others

Herbals

Body-based Therapies

Massage therapy

Lymphedema therapy

Pain, Anxiety, Edema

Energy Therapies

- Therapeutic touch, Reiki
  light, magnets, prayer

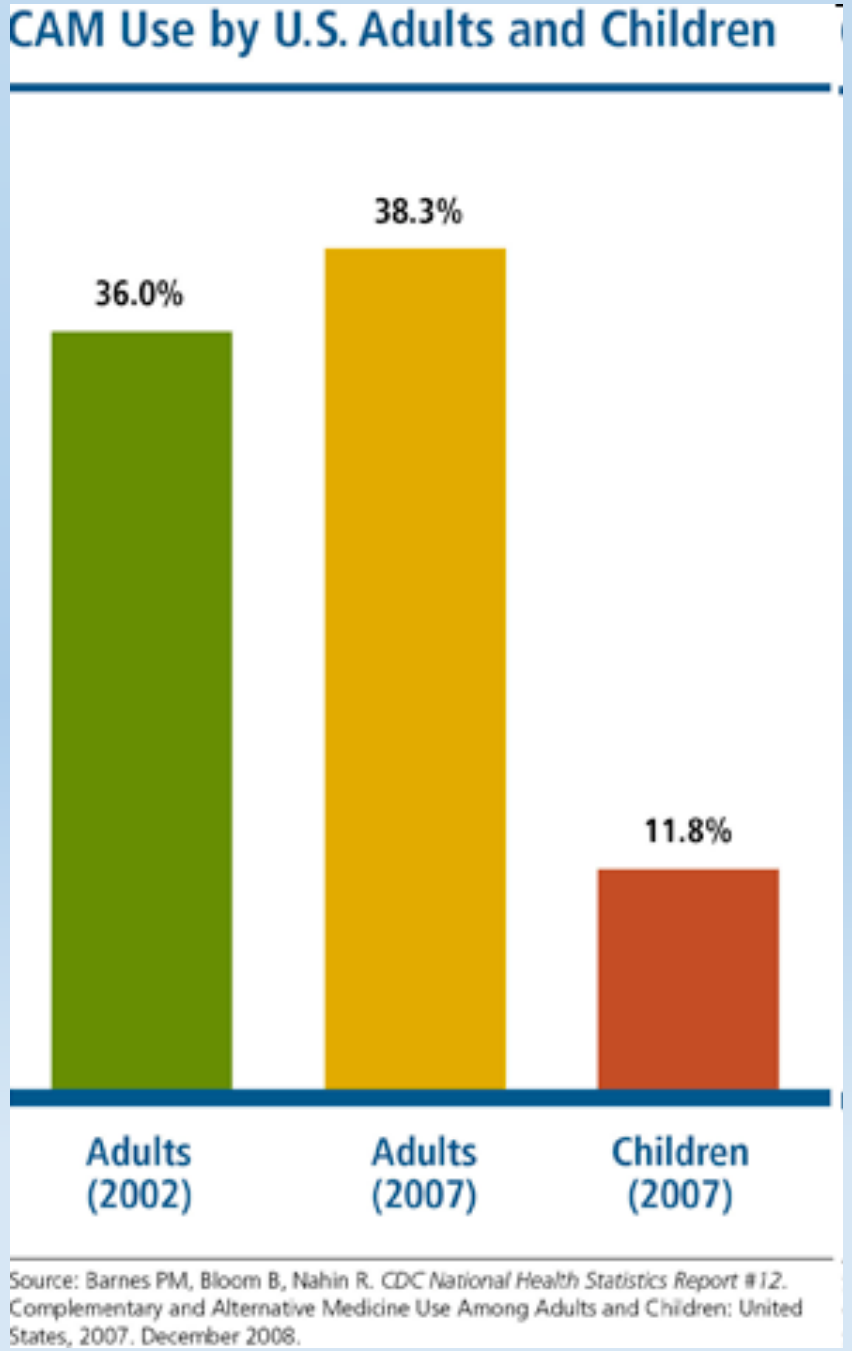
Stress reduction, enhancing quality of life

Integrative Medicine

A combination of therapeutic approaches that
includes best practices from
conventional and CAM medicine

AND

attempts to address the *intellectual*, *emotional*,
and *spiritual* aspects of illness
in addition to the physical.



Use of CAM therapies is common

CAM use: All Cancer Patients

- Following diagnosis: 54% - 69%

Vapiwala N. Cancer J, 2006:12:467

Ferrucci LM. J Alt Comp Med, 2009;15(6):673

- During treatment: 55-75%
  - 40-60% DS use

Hann DM. Integr Cancer Ther, 2005;4(4):294

Patterns of use: Advanced Cancer

- Prevalence: 15-100%

- Biologically-based therapies most common
  - With advancing disease, education associated with increased DS use

" …therapies that require little effort, with minimal side effects, available locally, and covered by insurance are more frequently used."

Reasons for CAM use: All Cancer Patients

- Perceived therapeutic response (38%)
  - Enhance conventional tx
  - Improve QoL
- Wanting control (17%)
- Strong belief in CAM (17%)
- Finding hope (10%)
- Last resort (10%)
- Disappointment with conventional treatment or practitioner (4%)

Verhoef MJ. Int Cancer Ther, 2005;4(4):274

Reasons for CAM use: Advanced Cancer

Direct

- Increase chance of cure
- ‘fighting disease’

Indirect

- Immune boosting
- Detoxifying

Other Reasons

- QoL: Improve well being, decrease stress, increase energy
- Reduce side effects

Belief about cure

2 GROUPS of CAM users with advanced cancers

(A) Believe cancer curable, in spite of poor prognosis

(B) Understand cancer is incurable

- Pragmatic
- Active problem solving
- Better coping skills
- ‘trying something in the face of adversity’

Sources of Info: Advanced Cancer

- Friends and Family

- Social groups
- Media
- Health food store staff
- CAM providers
- Conventional providers (often poor disclosure)

Our Survey: North Carolina Cancer Hospital

- Breast, Prostate, Colorectal, and Lung cancer
  - Tumor registry
- 2010-2012
- Paper questionnaire, follow-up phone call

Table 1 Characteristic of Respondents and Non-respondents

Characteristics		**Respondents (N=603)**	**Non-respondents (N=1189)**
		Mean (SD) or Freq. (%)	
Age (years)		63.5 (11.0)	61.1 (12.0)
Sex (female)		372 (61.7)	657 (55.3)
Race (white)		476 (78.9)	809 (68.0)
Ethnicity (non-Hispanic)		591 (98.0)	1141 (96.0)
Cancer Type			
	Breast	283 (46.9)	468 (39.4)
	Prostate	164 (27.2)	331 (27.8)
	Colorectal	87 (14.4)	221 (18.6)
	Lung	69 (11.4)	169 (14.2)
Cancer Stage[a]			
	0-1	278 (46.4)	463 (39.5)
	2	214 (35.7)	450 (38.4)
	3	68 (11.4)	158 (13.5)
	4	39 (6.5)	102 (8.7)

a. Of all surveyed participants (respondents and non-respondents), 160 were cancer stage "0", 581 patients were stage "1". Among 160 stage "0" participants, 144 (90%) had breast cancer; among 581 stage "1" patients, 259 (45%) had breast cancer. Nine patients' cancer stage was unknown.

Table 2 CAM use during or after initial cancer treatment for each cancer stage

	CAM use by CAM therapy category, n (%)				
Cancer Stage	Any CAM	MBM	DS	BBT	EM
All (n=599)	510 (85.1)	234 (39.1)	433 (72.3)	179 (29.9)	293 (48.9)
0-1 (n=278)	231 (83.1)	106 (38.1)	194 (69.8)	87 (31.3)	135 (48.6)
2 (n=214)	187 (87.4)	84 (39.3)	163 (76.2)	58 (27.1)	97 (45.3)
3 (n=68)	58 (85.3)	32 (47.1)	45 (66.2)	22 (32.4)	42 (61.8)
4 (n=39)	34 (87.2)	12 (30.8)	31 (79.5)	12 (30.8)	19 (48.7)

CAM Use Before, During, and After Active Cancer Treatment (N=603)

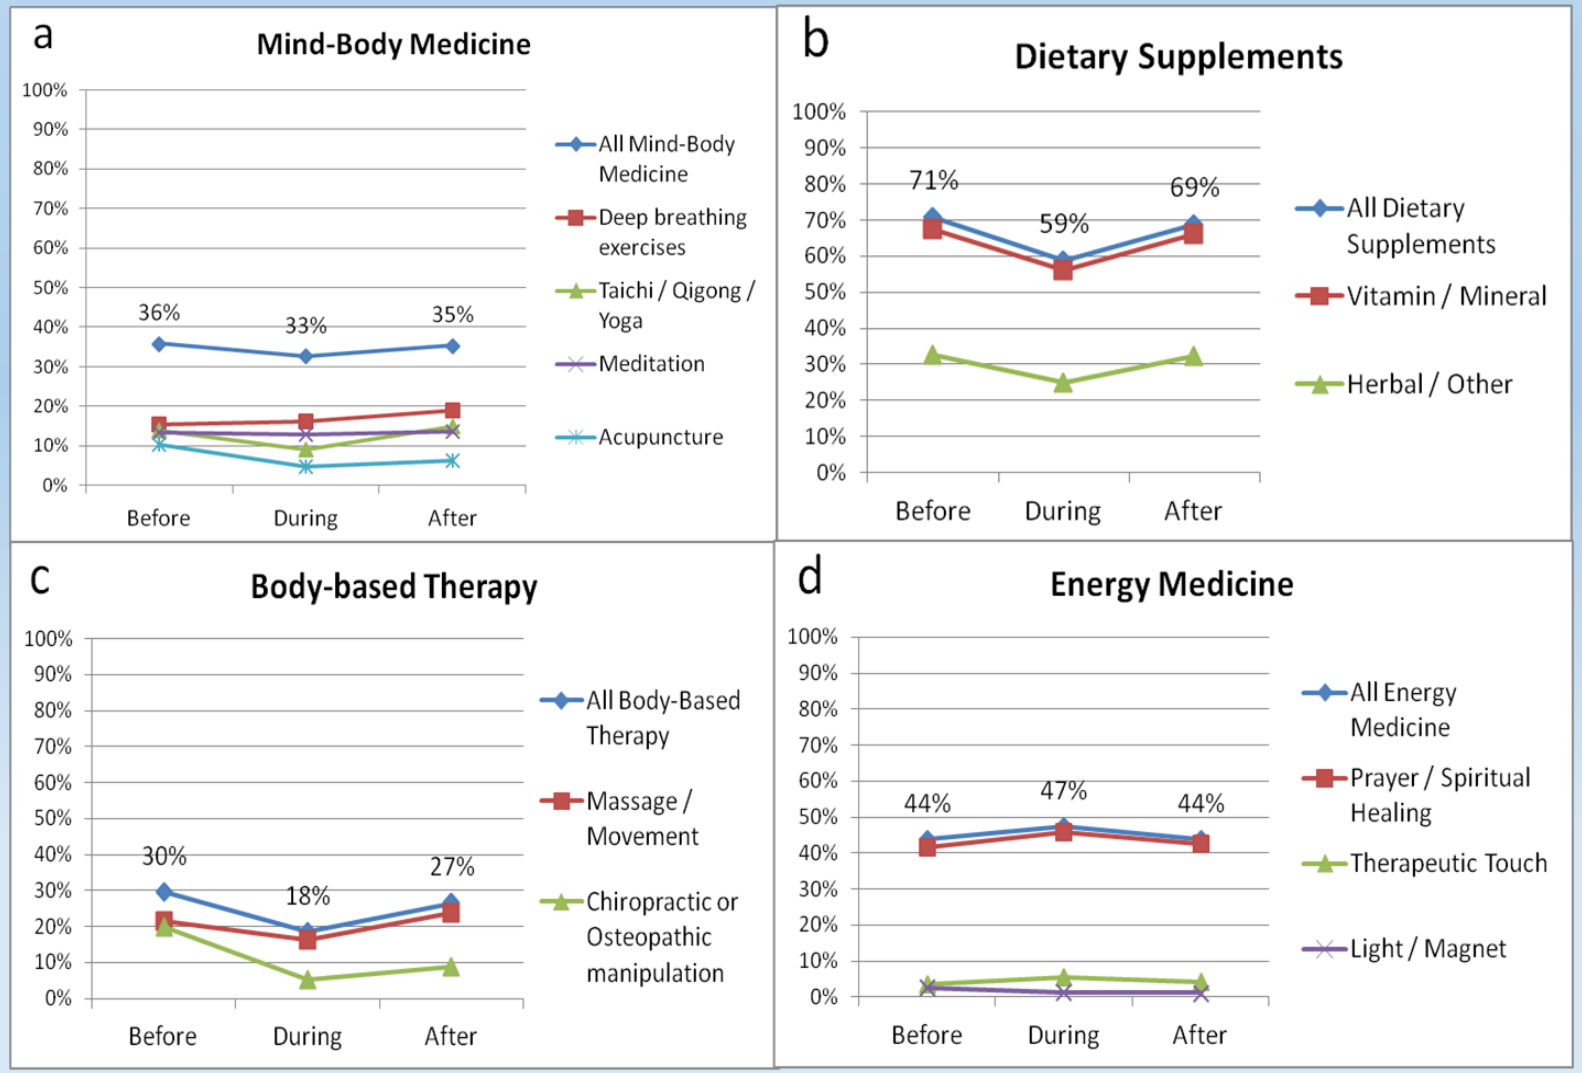


Table 2 CAM use during or after initial cancer treatment for each cancer stage

	CAM use by CAM therapy category, n (%)				
Cancer Stage	Any CAM	MBM	DS	BBT	EM
All (n=599)	510 (85.1)	234 (39.1)	433 (72.3)	179 (29.9)	293 (48.9)
0-1 (n=278)	231 (83.1)	106 (38.1)	194 (69.8)	87 (31.3)	135 (48.6)
2 (n=214)	187 (87.4)	84 (39.3)	163 (76.2)	58 (27.1)	97 (45.3)
3 (n=68)	58 (85.3)	32 (47.1)	45 (66.2)	22 (32.4)	42 (61.8)
4 (n=39)	34 (87.2)	12 (30.8)	31 (79.5)	12 (30.8)	19 (48.7)

Any CAM & Supplement use by time period

	Any CAM use %		
	Before diagnosis	During Treatment	After Treatment
All patients (603)	84.1%	79.1%	80.1%
End Stage Patients (39)	71.8%	84.6%	64.1%

	Any DS use %		
	Before diagnosis	During Treatment	After Treatment
All patients (603)	70.8%	58.7%	68.7%
End Stage Patients (39)	61.5%	74.4%	59.0%

Unadjusted Associations between Cancer Stage and Dietary Supplement use during and during/after Cancer Treatment (N=603)

		Dietary Supplement use during Cancer Treatment	Dietary Supplement use during or after Cancer Treatment
	n (%)[£]	OR (95%CI)	OR (95%CI)
Cancer Stage			
0-1	278 (46.2)	1.00	1.00
2	214 (35.6)	1.08 (0.75-1.55)	1.38 (0.92-2.08)
3	68 (11.3)	0.73 (0.43-1.24)	0.85 (0.48-1.49)
4	39 (6.5)	2.11 (0.99-4.49)	1.68 (0.74-3.80)

Table 3 Number of CAM therapies used during or after cancer treatment by cancer stage

		Number of Therapies used		
Cancer Stage		0	1	>1
All (n=599)		89 (14.9)	165 (27.6)	345 (57.6)
	0-1 (n=278)	47 (16.9)	71 (25.5)	160 (57.6)
	2 (n=214)	27 (12.6)	68 (31.8)	119 (55.6)
	3 (n=68)	10 (14.7)	16 (23.5)	42 (61.8)
	4 (n=39)	5 (12.8)	10 (25.6)	24 (61.5)

Sources of Advice on Supplement use (n=391)

Source		Freq (%)
Professional (75%)		
	Primary care providers (Family Doctor, Internist, etc.)	201 (51.4)
	Cancer care providers (surgeon, radiologist, oncologist)	137 (35.0)
	CAM provider	40 (10.2)
	Pharmacist	30 (7.7)
	Other providers (OBGyn, neurologist, psychiatrist, etc.)	12 (3.1)
	Nutritionist	6 (1.5)
Media (44%)		
	Internet	97 (24.8)
	Books	93 (23.8)
	Television/Magazines/Newspaper	91 (23.3)
Lay (47%)		
	Friends and Family	150 (38.4)
	Other patients with cancer / Support groups	58 (14.8)
	Staff at health food store	48 (12.3)

Association of New CAM Use after Cancer Diagnosis and Conversation about CAM with Oncology Provider

CAM Therapy	No CAM use prior to diagnosis	New CAM use after diagnosis[a] (%)	Prevalence Ratio (95% CI)[b]	p-value
MBM	366	52 (14.2)	1.79 (1.07, 2.99)	0.03
DS	162	63 (38.9)	1.83 (1.05, 3.19)	0.03
BBT	401	46 (11.5)	3.31 (1.85, 5.94)	0.00
EM	321	38 (11.8)	2.83 (1.48, 5.44)	0.00

Association of Cessation of CAM Use after Cancer Diagnosis with Conversation about CAM with Oncology Provider

CAM Therapy	CAM use prior to diagnosis	Cessation of CAM use after diagnosis[a] (%)	Prevalence Ratio with 95% CI[b]	p-value
MBM	210	57 (27.1)	0.46 (0.22, 0.93)	**0.03**
DS	414	111 (26.8)	0.85 (0.57, 1.28)	0.44
BBT	175	97 (55.4)	0.87 (0.63, 1.19)	0.37
EM	255	19 (7.5)	1.57 (0.65, 3.84)	0.32

Table 4 Association of New CAM Use after Cancer Diagnosis and Conversation about CAM with Oncology Provider

Cancer Stage	No CAM prior to diagnosis	New CAM use after diagnosis[a] (%)	Prevalence Ratio (95% CI)[b]	p-value
0-1	35	7 (20.0)	0.81 (0.10, 6.69)	0.84
2	35	15 (42.9)	1.76 (0.56, 5.52)	0.33
3	5	2 (40.0)	1.50 (0.09, 23.98)	0.77
4	11	7 (63.6)	1.80 (0.35, 9.28)	0.48

a. CAM therapy use changed from "No" before cancer diagnosis to "Yes" after cancer diagnosis

b. Model adjusted for no covariates

Table 5 Association of Cessation of CAM Use after Cancer Diagnosis with Conversation about CAM with Oncology Provider

CAM Therapy	CAM use prior to diagnosis	Cessation of CAM use after diagnosis[a] (%)	Prevalence Ratio with 95% CI[b]	p-value
0-1	233	143 (61.4)	1.35 (0.94, 1.95)	0.11
2	170	99 (58.2)	1.15 (0.75, 1.77)	0.53
3	60	36 (60.0)	1.55 (0.79, 3.07)	0.20
4	27	20 (74.1)	1.01 (0.29, 3.46)	0.98

a. CAM therapy usage changed from "Yes" before active cancer treatment to "No" during/after cancer treatment

b. Model adjusted for no covariates

Integrative Medicine at Carolina Pointe II

- Integrative Medicine Consultation
- Telemedicine
- Acupuncture

- Psycho-oncology
- Support groups
- Integrative Health Coaching

- Lymphedema therapy
- Massage therapy
- Yoga classes
- Nutrition
